tylerdurette.vercel.app

Boca Raton, FL

SUMMARY

DevOps Engineer with 6+ years of experience across AWS infrastructure, Infrastructure-as-Code, CI/CD pipelines, Linux platform engineering, containerization, automation, and AI integrations. Hands-on with Terraform, Ansible, Jenkins, Kubernetes, Docker, GitHub Actions, Python, and Bash, with experience and passion for building AI-driven products, data pipelines, and predictive models. Strong fit for roles involving backend automation, AI systems, code evaluation, and scalable cloud infrastructure.

SKILLS

- **Cloud:** AWS, AWS GovCloud, Amazon EKS, Kubernetes, Infrastructure-as-Code (IaC), Cloud Engineering
- **Infra:** Terraform, Ansible, Docker, Containerization, Linux, RHEL
- **CI/CD:** Jenkins, Nexus, GitHub Actions, Argo CD
- **Programming:** Python, Bash/Shell Scripting, Xcode, TypeScript, Full-Stack Development
- **AI/ML:** Agentic Workflows, LLMs, Prompt Engineering, Embeddings, Fine-Tuning, OpenClaw, Data Analytics. Predictive Modeling, Hugging Face, Codex, Claude, Model Context Protocol (MCP)
- **Other:** Automation, Grafana, Prometheus, Robotics, ROS, NML

EDUCATION

James Madison University

Harrisonburg, VA | May 2021

Bachelor of Science: Integrated Science and Technology

Concentration in Telecommunications, Networking, and Security

Activities and societies: ISAT Honor Society, Sigma Phi Epsilon

PROFESSIONAL EXPERIENCE

DevOps Engineer

Booz Allen Hamilton | March 2023 - Present

- Supported VA cloud modernization by building AWS GovCloud VPC infrastructure with Terraform and GitHub Actions, provisioning EC2, security groups, load balancers, IAM policies, and core networking while using Ansible workflows to configure 10+ applications across 5+ environments.
- Migrated CI/CD pipelines from on-prem infrastructure to AWS EC2 by replicating Jenkins configurations, validating build workflows, and resolving cutover issues with minimal disruption to development teams.
- Contributed to a major cutover of Jenkins and CI/CD workloads from EC2-hosted infrastructure to a new AWS EKS platform built from scratch, working across Kubernetes configuration, Helm, persistent storage, IAM, and release validation.
- Administered and troubleshot Jenkins, Nexus, RHEL servers, and AWS infrastructure while supporting package upgrades, legacy job modernization, and AI-assisted process improvements.

DevOps Engineer

Forterra (previously RR.ai) | August 2021-March 2023

- Containerized our autonomy software in a network of Docker images+containers to replicate real vehicle configurations, and integrated them with third-party simulation software that provides various kinds of real-life data and displays necessary for most immersive and effective simulation
- Scripted a workflow of Bash and Python scripts to run simulation containers with new code builds deployed from our CI/CD pipeline; in which engineers now use daily for development and testing
- Maintained current CI/CD pipeline on Jenkins and assisting in the development of more robust CI/CD pipeline using Jenkins, GitLab, BlueOcean, Conan, Artifactory, and Groovy scripts
- Spearheaded upgrade of our source code to compile in newer version of Linux and assisted in migration of various projects from Subversion to GitLab Version Control
- Redesigned the deployment process of our Linux kits using Clonezilla, Ansible, and Bash scripts - reducing our deployment time from days to hours

PROJECTS

MMA AI (iOS)

[apps.apple.com/mma-ai](https://apps.apple.com/us/app/mma-ai/id1644444444) | 2025

- Built native SwiftUI iOS application deployed to the App Store for providing AI-driven UFC fight analysis, predictions, fighter research, matchup comparisons, odds visualizations, and conversational insights
- Integrated a Python/Flask backend on raspberry pi with OpenAI Responses API, live data pipelines, chat history, exportable analysis

MLB, MMA, and NFL AI & Data Dashboards

mlb-ai.streamlit.app - mma-ai.streamlit.app - nfl-ai.streamlit.app | 2023-2025

- Built Streamlit dashboards for sports analytics across MLB, UFC/MMA, and NFL using dense historical datasets for exploration, matchup analysis, visualizing trends, line tracking and movement graphs, and other utilities
- Predictive models used to originate odds and identify top EV spots per event
- Automated recurring data collection, cleaning, reporting, and model workflows using Python, pandas, XGBoost, LightGBM, and numerous scheduled recurring scripts

Polymarket Bots & Prediction Market Automation

github.com/bestisblessed/polymarket-bots | 2026

- Built real-time production Polymarket monitoring services for UFC & NFL sports markets, tracking whale/insider wallet activity, and market liquidity using Polymarket Gamma/Data/CLOB APIs
- Integrated Pushover notifications and X/Twitter alerting for real-time market intelligence
- Automated data pipelines that compile and publish consolidated dashboard of betting split data

The Fight Predictor Agent

x.com/TheFightAgent | 2025

- Deployed an automated X/Twitter AI agent that answers MMA fight questions, posts fight analysis, and generates matchup insights from fighter data
